

Even more benefits! Additional features:

Boost your productivity

QoreMail with a contextualized system helps you manage your communications efficiently and automate workflows to generate instant responses such as automated response emails, producing quotes for your customers or filing documents. QoreMail can automatically analyze and process 10,000 emails per hour, categorizing those that are highly recommended for auto response, while adding them to an email queue for approval of an order, an invoice, a document to be archived, destroyed and more.

Configurability

With our simple system based on dynamic and intelligent rules, you can easily configure QoreMail to detect relevant information and trigger actions. As the demand for automation increases in manufacturing and production processes, QoreMail is a unique solution to automate low value administrative tasks. For example, the management of supplier invoices, preparation of customer account openings, validation of inventory availability, and preparation of quotes are some of the tasks that should no longer require the attention of a person, and our technology allows you to resolve this.

Uses in your processes

- Automated processing of information requests, quotes, purchase orders and invoices.
- Automated reconciliation and data enrichment integrated into systems (e.g. CRM, ERP, etc.).
- Automatic archiving and classification of documents (and communications) in an EDRMS (DMS) system (Like QoreUltima).
 - Workflows triggered as soon as information is received and validated.
- Auto-completion of information fields and forms.
 - Automated routing of emails or sms to the right person or department based on intelligent business rules.
- Automatic update of information in third-party systems without human intervention.
- Validation of external data sources and creation of automatic responses based on a set of intelligent rules tailored to your practices and industry.

Maximize your ROI

With QoreMail, (based on client experience) on average, you will save up to 30-times more in time, effort, and resources.

High processing capacity

QoreMail processes commands at a rate of about 1000 requests per second (~ 3 million+ / hour).
